

Certified Automotive Specialists

Is committed to recycling as many products as possible.

Where it all goes;

- Tires are shredded and turn into playground material and roads.
- Engine oil is reclaimed and used in off shore ships for fuel.
- Lead batteries and wheel weights are stripped for the precious metal.
- Anti-freeze is cleaned and re-used in many industries.
- All scrap metal is shipped to a steel plant to be melted down for re-use.
- Aluminum cans, plastic and glass go to local recycler.
- Transmission, brake and other fluids are refined into other products.
- Oil, fuel and transmission filters are drained and shredded.
- Floors are mopped, so no greasy water runs into the storm drains.
- Paper and cardboard are flattened and sent to a recycling center.
- Old computers and electronics are taken to an e-waste round-up.
- Air conditioning free-on is evacuated, tested and recycled.

We are always looking for better ways to protect our environment
